This session provides an update on Cybersecurity Safety, or CYBERSAFE, the U.S. Navy’s enhanced cybersecurity program. It supplements the Risk-Based Management Framework (RMF) approach addressing the engineering, development, procurement, material control, maintenance, and operational tactics, techniques, and procedures (TTPs) development. Navy weapon system mission assurance is dependent on the transformation of its cyber-culture and crew proficiency to institute CYBERSAFE requirements and due diligence to a select subset of platforms or components for which a failure caused by a cyber attack would result in a critical risk to mission and/or personal injury.
